

Oregon Institute of Technology
Computer Systems Engineering Technology Department
Embedded Systems Engineering Technology Program Assessment
2012-13

I. Introduction

The Embedded Systems Engineering Technology (ESET) program was proposed to OUS in spring of 2006 and approved in August, 2006. The curriculum for the ESET program is common with the hardware and software programs for the freshman year. The sophomore year of the ESET program has been constructed to mirror the track through both the Computer Engineering Technology (CET) and Software Engineering Technology (CET) programs, called the Dual Degree program. The ESET program junior year is when ESET students get instruction specific to topics of embedded systems engineering. These courses were taught for the first time in fall, 2008.

II. Mission, Objectives and Program Student Learning Outcomes

The mission of the Embedded Systems Engineering Technology (ESET) Degree program within the Computer Systems Engineering Technology (CSET) Department at Oregon Institute of Technology is to prepare our students for productive careers in industry and government by providing an excellent education incorporating industry-relevant, applied laboratory based instruction in both the theory and application of embedded systems engineering. Our focus is educating students to meet the growing workforce demand in Oregon and elsewhere for graduates prepared in both hardware and software aspects of embedded systems. Major components of the ESET program's mission in the CSET Department are:

- I. To educate a new generation of Embedded Systems Engineering Technology students to meet current and future industrial challenges and emerging embedded systems engineering trends.
- II. To promote a sense of scholarship, leadership, and professional service among our graduates.
- III. To enable our students to create, develop, apply, and disseminate knowledge within the embedded systems development environment.
- IV. To expose our students to cross-disciplinary educational programs.
- V. To provide government and high tech industry employers with graduates in embedded systems engineering and related professions.

Program Educational Objectives

The Program Educational Objectives reflect those attributes a student of the ESET program will practice in professional endeavors.

- A. Graduates of the embedded program are expected to understand societal impact of embedded systems and technological solutions.
- B. Graduates of embedded degree program are expected to do hardware/software co-design for embedded systems. Graduates will continue to develop skills in analysis, approach, optimization, and implementation of embedded systems.
- C. Graduates of the embedded program are expected to obtain the knowledge, skills and capabilities necessary for immediate employment in embedded systems. Embedded Systems is a profession increasingly driven by advances in technology, therefore graduates are expected to obtain the necessary life-long learning skills to enable them to be able to adapt to a changing environment.
- D. Graduates of the embedded program are expected to develop a broad base of skills. These skills will prepare them for professional practice: 1) as embedded engineers, 2) participants in embedded development teams, and 3) effective communicators within a multidisciplinary team.
- E. Graduates of the embedded program are expected to acquire knowledge of management and marketing of embedded projects and products and to prepare for series production.

Program Student Learning Outcomes

Embedded Systems Engineering Technology baccalaureate graduates will be engaged in:

- 1. Application of mathematics including differential and integral calculus, probability, and discrete mathematics to hardware and software problems (Objectives C, D, E).
- 2. Application of project management techniques to embedded systems projects (Objectives C and D).
- 3. Application of knowledge of embedded systems engineering technology, along with some specialization in at least one area of computer systems engineering technology. (Objective D)
- 4. A broad education and knowledge of contemporary issues necessary to reason about the impact of embedded system based solutions to situations arising in society. (Objective A)
- 5. Identification and synthesis of solutions for embedded systems problems. (Objective B, C)
- 6. Design, execution and evaluation of experiments on embedded platforms. (Objective C, D)

7. Analysis, design and testing of systems that include both hardware and software. (Objective B, D)
8. Documenting the experimental processes and to writing of satisfactory technical reports/papers. (Objective D, E)
9. Delivery of technical oral presentations and interacting with a presentation audience. (Objective D, E)
10. Recognition for and the motivation to further develop their knowledge and skills as embedded engineering advances occur in industry. (Objective C)
11. Working effectively, independently, and in multi-person teams. (Objective D)
12. Professional and ethical execution of responsibilities. (Objective A, D)

III. Three-Year Cycle for Assessment of Student Learning Outcomes

Assessment activities for the ESET program began Fall, 2008. Table 1 presents planned learning outcome assessment on a three year cycle. The rows of this table correspond to the PSLO. The entries in the cells corresponding to the year represent mapping from the row (PSLO) to the ISLO. The number in the cells of the table corresponds to the ISLO defined for the OIT assessment cycle:

- ISLO 1: OIT students will demonstrate effective oral, written and visual communication.
- ISLO 2: OIT students will demonstrate the ability to work effectively in teams and/or groups.
- ISLO 3: OIT students will demonstrate an understanding of professionalism and ethical practice.
- ISLO 4: OIT students will demonstrate critical thinking and problem solving.
- ISLO 5: OIT students will demonstrate knowledge and understanding of career development and lifelong learning.
- ISLO 6: OIT students will demonstrate mathematical knowledge and skills.
- ISLO 7: OIT students will demonstrate scientific knowledge and skills in scientific reasoning.
- ISLO 8: OIT students will demonstrate cultural awareness.

Table 1: Baccalaureate Outcome Assessment Timeline

#	Learning Outcomes	08-09	09-10	10-11	11-12	12-13	13-14
1	The ability to apply mathematics including differential and integral calculus, probability, and discrete mathematics to hardware and software problems.	6			6		
2	An ability to apply project management techniques to embedded systems projects.		2, 3			2, 3	
3	Knowledge of embedded systems engineering technology, along with some specialization in at least one area of computer systems engineering technology.			4			4
4	A broad education and knowledge of contemporary issues necessary to reason about the impact of embedded system based solutions to situations arising in society.		3, 8			3, 8	
5	The ability to identify and synthesize solutions for embedded system problems.			4			4
6	The ability to design, conduct and evaluate the results of experiments on embedded platforms.	7			7		
7	The ability to analyze, design and test systems that include both hardware and software.	7			7		
8	The ability to document experimental processes and to write satisfactory technical reports/papers.			1			1
9	The ability to make technical oral presentations and interact with an audience.			1			1
10	The recognition for and the motivation to further develop their			5			5

	knowledge and skills as embedded engineering advances occur in industry.						
11	The ability to work effectively independently and in multi-person teams.		2			2	
12	An understanding of professional and ethical responsibility.		3, 8			3, 8	

To summarize, Table 2 shows the program learning outcomes (identified by number only) that will be assessed for each of the next three years.

Table 2: Summary of Assessment Timeline

Academic Year	Outcomes
2011-12	1, 6, 7
2012-13	2, 4, 11, 12
2013-14	3, 5, 8, 9, 10

Outcomes to be assessed are listed below:

2. An ability to apply project management techniques to embedded systems projects.
4. A broad education and knowledge of contemporary issues necessary to reason about the impact of embedded system based solutions to situations arising in society.
11. The ability to work effectively independently and in multi-person teams.
12. An understanding of professional and ethical responsibility.

Target courses where the assessment tools were to be applied for the 2012-13 academic year are summarized in Table 3.

Table 3: 2012 – 2013 Summary Courses of Assessment Application

Outcome	Courses	Term
2	CST 412 – Senior Development Project I CST 432 – Senior Development Project III	Fall Spring
4	CST 422 – Senior Development Project II CST 345 – HW/SW Co-Design	Winter Winter
11	CST 372 – Embedded Software Design II CST 347 – Real-Time Operating Systems	Winter Spring
12	CST 371 – Embedded Systems Design CST 466 – Embedded System Security	Fall Spring

IV. Summary of 2012-13 Assessment Activities

The following are the direct assessment activities that were accomplished during 2012 - 2013 academic year. Each activity is introduced with a description of the activity followed by a table that summarized the rubric criteria along with the rubric application results. Where available, the rubric used for assessment is shown in Appendix A.

PSLO #2

Application of project management techniques to embedded systems projects.

CST 412 – Senior Development Project: Fall 2012

The Senior Project is an individual project completed by each student in the program. Each project represents individual effort. The write up completed by the end of the term should contain an overview of the project to be completed as well as specific design criteria to be completed by the end of sequence. By the end of the first term, the student should have a good idea of the project they will be working on and how they will be scheduling their work for the remainder of the sequence.

Data Collection Date: Nov 16, 2012

Coordinator: James N. Long

Assessment Method: The final report for the project was collected at the end of the term. This report contains the project description, subsystem definitions, work breakdown, and dependency definitions. The report was read and each performance criteria was evaluated.

Table 1 shows the results of the evaluation.

Performance Criteria	Assessment Method	Measurement Scale	Minimum Acceptable Performance	Results
1. Defines overall problem context.	Sr. Project Report	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	2 of 2 100%
2. Breaks problem down into subsystems and provides reasonable work load estimates.	Sr. Project Report	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	2 of 2 100%
3. Describes subsystem dependencies.	Sr. Project Report	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	2 of 2

				100%
4. Reflects subsystems and dependencies in project schedule.	Sr. Project Report	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	2 of 2 100%

Table 1 – Assessment outcome results for CST 412 – *Senior Development Project*

Evaluation of results: The results of this assessment indicate students are well versed at decomposition of a large problem. They were able to define the problem boundaries, break the problem down into well-defined subsystems and derive dependencies on those subsystems.

Actions: No actions required.

CST 432 – Senior Development Project: Spring 2013

The Senior Project is an individual project completed by each student in the program. Each project represents individual effort. The write up completed by the end of the year should contain an overview of the project to be completed as well as specific design criteria to be completed by the end of sequence. By the end of the year, the student should have completed the proposed project and have a good historical record of changes they made while developing the system. These changes should reflect is modified schedules and change reports related to the overall progress of the project.

Data Collection Date: May 24, 2013 Coordinator: James N. Long

Assessment Method: The student project logs were collected from the year of project development. These project logs contain project time line modifications as well as issue report that impact project completion. The logs were read and evaluated for the rubric shown in Table 2 below. In the logs, change correlation between issue reports and development time line/feature set was closely noted.

Performance Criteria	Assessment Method	Measurement Scale	Minimum Acceptable Performance	Results
1. Defines overall problem context.	Sr. Project Report	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	2 of 2 100%
2. Breaks problem down into subsystems and provides reasonable work load estimates.	Sr. Project Report	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	2 of 2 100%

3. Describes subsystem dependencies.	Sr. Project Report	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	2 of 2 100%
4. Reflects subsystems and dependencies in project schedule.	Sr. Project Report	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	2 of 2 100%

Table 2 – Assessment outcome results for CST 432 – *Senior Development Project*

Evaluation of results: In this assessment, it was clear that students are good at changing action and project course depending on problems encountered in the project development cycle and the outcome of solving the encountered problem.

Actions: No actions required.

PSLO #4

A broad education and knowledge of contemporary issues necessary to reason about the impact of embedded system based solutions to situations arising in society.

CST 422 – Senior Development Project: Winter 2013

The student Sr. Project reports were collected and evaluated against the Societal Impact rubric. In the project report, students are expected to build a business case in which they detail how their intended system will be used and what impacts this will have on groups of end users. Students are expected to look beyond traditional user groups to evaluate broader impacts of work they are performing.

Data Collection Date: 3/7/2013

Coordinator: James N. Long

Assessment Method: The project report was collected at the end of the term. This report contains several sections that outline a business case for the creation of the project. In these sections, the student describes system purpose, intended system users, system functional description, and impacts of system deployment as well as future considerations for the system operation. These areas of the report were read and evaluated against the societal impact performance criteria. Table 3 shows the results of this evaluation.

Performance Criteria	Assessment Method	Measurement Scale	Minimum Acceptable Performance	Results
----------------------	-------------------	-------------------	--------------------------------	---------

1. Defines and evaluates end users.	Sr. Project Report	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	2 of 2 100%
2. Defines system behavior as related to defined users.	Sr. Project Report	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	2 of 2 100%
3. Describes impacts of system operations on end user population.	Sr. Project Report	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	0 of 2 0%
4. Extrapolates impacts to include groups beyond immediate users.	Sr. Project Report	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	0 of 2 0%

Table 3 – Assessment outcome results for CST 422 – Sr. Development Project II

Evaluation of results: The results of this assessment indicate that ESET students have a strong grasp on defining direct users of their system and operations their system are to perform. Their understanding of broader impacts of system creation and deployment is limited. Project reports reviewed showed little consideration or understanding of the impacts the project would have on society.

Actions: In the Sr. Project sequence, students need to be instructed on evaluation of the broader impacts of systems they are building and where in their project write up this analysis is to be included.

CST 345 – HW/SW Co-Design: Winter 2013

Junior level students in the ESET and CET program Hardware/Software Co-design class were given a laboratory problem where they consider the design of a digital Thermometer using the DS1626 PMOD - Digital Thermometer with 3-wire interface. The device is a temperature-to-digital converter which provides temperature readings indicating the temperature.

Data Collection Date: 3/7/2013

Coordinator: Ralph Caresteia

Assessment Method: Students are given the following problem:

Problem Statement: Construct an interrupt driven temperature controller for Pico Blaze microcontroller in the Xilinx ISE environment. Write an assembly language program to implement interrupt driven input/output require getting data from a one-wire interface temperature sensor and displaying it with their multiplexed display IP previously developed in lab. Design a digital thermometer that displays the temperature in Fahrenheit on the displays. Take into consideration the user interface and develop with detail on how the intended system will be used and what impacts this will have on groups of end users.

Goal:

The goal of the assessment of this outcome is to measure the capability of students to discuss the impact of their engineering solutions. The social discussion may include economic implications (such as sustainability and usability) or social acceptance of the solution (such as comfort of usage, replacing of products, and public safety).

1. Given a situation that involves an engineering solution, students discuss the impact of the design on the environment or the social implications as stated in the header of this rubric.
2. Given a situation that involves an engineering solution, students can discuss the impact of the design on the environment or the social implications as stated in the header of this rubric.
3. Given a situation that involves an engineering solution, students can discuss the impact of the design on the environment and the social implications as stated in the header of this rubric.
4. Students can discuss the impact of their design on the environment or the social implications as stated in the header of this rubric.
5. Students can discuss the impact of their design on the environment and social implications as stated in the header of this rubric.

Table 3 shows the results of this evaluation.

Performance Criteria	Assessment Method	Measurement Scale	Minimum Acceptable Performance	Results
Professional Integrity & Ethical Decision Making Defines and evaluates end users.	Lab Assignment	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	7 of 7 100%
Safety & Health Issues	Lab Assignment	No Proficiency (1)/ Some Proficiency (2)/		

		Proficiency (3)/ High Proficiency (4)	Proficiency (3)	3 of 7 43%
Behavior related to users.	Lab Assignment	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	4 of 7 57%
Environmental Aspects	Lab Assignment	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	6 of 7 86%

Table 3 – Assessment outcome results for CST 345 – HW/SW Co-Design

Evaluation of results: Students did well in their ability to understand the problem, gathering information with respect to making decisions and design integrity. They understood the social impact of the design and explained it in their report. The results of this assessment indicate that ESET students have a strong grasp on defining direct use of their system and the operations of this design. Their understanding of safety issues leading to supporting their design and results was limited. After talking to students involved in the assessment, it was clear that there was no understanding of safety issues associated here.

Societal impact analysis of system deployment as being a requirement of the deliverable was strong with most of the students knowing how the end user could and would use this design. The environmental aspect of this was not well explained to the student and therefore was very hard to obtain any meaningful evaluation on this design.

Actions: Students need to have more discussion on ramification of design related to safety and environmental conditions. Reformulation of the problem to better explain the environmental aspect would help with gaining good results for gauging understanding of system environmental impacts.

PSLO #11

Working effectively, independently, and in multi-person teams.

CST 372 – Embedded Systems Development II: Winter 2013

The Embedded Systems Development II course is the second term in a three term team based project class. Student teams were observed throughout the term. During the term, the instructor noted different aspects of student team based behavior and related this to the eventual outcome of the project goals. The teams had both dual major students and embedded

systems students on them. Only the embedded systems students were included in the final assessment results.

Data Collection Date: 3/7/2013

Coordinator: Phong Nguyen

Assessment Method: The OIT Teamwork Rubric was applied to the different project teams by the course instructor, taking into account observed team behavior and project outcome. Students also evaluated the performance of their own teams using the same rubric. Table 4 shows the results of this evaluation.

Performance Criteria	Assessment Method	Measurement Scale	Minimum Acceptable Performance	Results
1. Identify and achieve goal/purpose.	Student and Instructor based Observation	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	8 of 9 88%
2. Assume roles and responsibilities as appropriate.	Student and Instructor based Observation	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	6 of 9 66%
3. Team/group members interact appropriately.	Student and Instructor based Observation	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	8 of 9 88%
4. Recognize and help reconcile differences among team/group members.	Student and Instructor based Observation	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	9 of 9 100%
5. Team/group members share work appropriately.	Student and Instructor based Observation	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	8 of 9 88%
6. Develop strategies for effective action.	Student and Instructor based Observation	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	9 of 9 100%

Table 4 – Assessment outcome results for CST 372 – Embedded Systems Development II

Evaluation of results: Students performed well in the team work and project based activities. One area lower than the rest was the willingness to assume roles and responsibility.

Actions: At the start of each quarter, discuss with students the importance of taking on tasks and assuming responsibility for project components.

CST 347 – Real-Time Operating Systems: Spring 2013

This term, students in the Real-Time Operating Systems course worked on projects individually; therefore, this measurement was not performed.

PSLO #12

Professional and ethical execution of responsibilities.

CST 371 – Embedded Systems Design: Fall 2012

Students were given a homework assignment dealing with ethical scenarios. The assignment was in two parts. The first part had the students choose three different statements from a professional code of ethics created by a professional society related to the student's field of study. The student was asked to explain each of the three chosen statements and provide an example of where the code statement would apply. In the second part of the assignment, the students were given a scenario from a professional work environment. The students were asked to apply the given code of ethics and explain an appropriate course of action.

Data Collection Date: December 9, 2012 Coordinator: Phone Nguyen

Assessment Method: The assignment was given and collected. Each essay paper was read and evaluated based on the performance criteria shown below in Table 6.

Performance Criteria	Assessment Method	Measurement Scale	Minimum Acceptable Performance	Results
1. Using code of ethics, describes ethical issue(s)	Homework Assignment	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	6 of 6 100%
2. Describes parties involved and discusses their points of view.	Homework Assignment	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	6 of 6 100%

3. Describes and analyzes possible/ alternative approaches	Homework Assignment	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	6 of 6 100%
4. Chooses an approach and explains the benefits and risks.	Homework Assignment	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	6 of 6 100%

Table 6 – Assessment outcome results for CST371 – Embedded Systems Design

Evaluation of results: Students show a good grasp on ethical issues and the application of those concepts to their field of study.

Actions: No action required.

CST 466 – Embedded Systems Security: Spring 2013

Students were given a homework assignment dealing with a specific ethical scenario. The students were asked to apply a given code of ethics and explain an appropriate course of action for the scenario.

Data Collection Date: May 31, 2013 Coordinator: Phong Nguyen

Assessment Method: The assignment was given and collected. Each essay paper was read and evaluated based on the performance criteria shown below in Table 7.

Performance Criteria	Assessment Method	Measurement Scale	Minimum Acceptable Performance	Results
1. Using code of ethics, describes ethical issue(s)	Homework Assignment	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	5 of 5 100%
2. Describes parties involved and discusses their points of view.	Homework Assignment	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	5 of 5 100%
3. Describes and analyzes possible/ alternative approaches	Homework Assignment	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	5 of 5

				100%
4. Chooses an approach and explains the benefits and risks.	Homework Assignment	No Proficiency (1)/ Some Proficiency (2)/ Proficiency (3)/ High Proficiency (4)	Proficiency (3)	5 of 5 100%

Table 7 – Assessment outcome results for CST 466 – Embedded Systems Security

Evaluation of results: Students in this assessment sample showed a good grasp on ethical issues related to their field of study.

Actions: Although results of this assessment show a good grasp of ethical issues, consideration of a 300 level ethics course needs to be discussed.

V. Summary of Student Learning

PSLO #2 - Application of project management techniques to embedded systems projects.

Evaluation of results: Students are good at project decomposition; however, there was a weakness in sequencing of task dependencies.

Actions: Emphasis of project decomposition and timeline modifications needs to be continued during all three quarters of project execution.

PSLO #4 - A broad education and knowledge of contemporary issues necessary to reason about the impact of embedded system based solutions to situations arising in society.

Evaluation of results: Students have a good grasp of direct users of their systems; however, they have trouble extrapolating beyond this direct end-user experience.

Actions: Students need to be instructed on creation of a business case for the systems they construct in the junior and senior project sequences. In the business, they should consider larger impacts of their system beyond direct technical relationships.

PSLO #11 – Working effectively, independently, and in multi-person teams.

Evaluation of results: Overall, students work well in small teams in project planning and execution. Some students have trouble with taking on tasks without direct assignment.

Actions: Throughout project course duration, students need to be reminded of the importance of taking on tasks in a self-motivated fashion rather than requiring micro-management.

PSLO #12 – Professional and ethical execution of responsibilities.

Evaluation of results: Assessment shows a good grasp on ethical responsibilities.

Actions: Although student performance on this PSLO is good, a carryover discussion of addition 300 level ethics related course still needs to be had.

***THE FOLLOWING ACTION ITEMS WERE RECORDED IN THE 2009 – 2010
ASSESSMENT CYCLE:***

PSLO #2

Application of project management techniques to embedded systems projects.

Actions: In the 2009-2010 Assessment report, a change was recommended for emphasis of at project scheduling and work estimation in the junior project sequence. This has been done as well as more emphasis in the first term of the Sr. Project sequence. The results of this assessment show a better understanding of work scheduling dependencies resulting from the increased emphasis.

PSLO #4

A broad education and knowledge of contemporary issues necessary to reason about the impact of embedded system based solutions to situations arising in society.

Actions: In the 2009-2010 assessment cycle, there was a deficiency in understanding of broader impact analysis of system development and deployment. As an action item, there was to be a stronger emphasis on this area of system planning. The emphasis was added to the course; however, reports did not reflect a stronger understanding of system development societal impacts. In reflection with the students involved in the assessment exercise, there was a personal understanding of these concepts; they were not formalized in the project report. It is recommended that the importance of formally documenting these ideas be emphasized and specified as a section in the project report. This will be re-assessed in the next assessment cycle.

PSLO #11

The ability to work effectively independently and in multi-person teams.

Actions: In the 2009-2010 assessment cycle, there were no action items specified related to this outcome.

PSLO #12

An understanding of professional and ethical responsibility.

Actions: In the 2009-2010 assessment cycle, the recommendation was put in place to include a 300 level ethics course in the curriculum. This has not yet been worked into the ESET sequence due to credit limits; however, will be re-visited in the 2013-2014 academic year. Professionally related ethical issues have been bolstered in the current curriculum through additional lecture/lab discussion. Results of this assessment show there is a difference in student understanding of ethical issues as compared to the 2009-2010 assessment cycle.

Appendix A – Assessment Rubrics

PSLO #2

Application of project management techniques to embedded systems projects.

Performance Criteria	Limited or No Proficiency (1)	Some Proficiency (2)	Proficiency (3)	High Proficiency (4)	Score
1. Defines overall problem context.	Has a vague idea of what the problem boundaries are and is uncertain what functions are required of a completed system.	Gives project boundaries and a definition of internal and external entities.	Describes the problem for purpose of a defined end point.	Describes problem is a concise statement. Shows a clear understanding of system actors.	
2. Breaks problem down into subsystems and provides reasonable work load estimates.	Gives little indication that system has been decomposed and no workload has been estimated for subsystem completion.	Shows a basic understanding of system decomposition but displays no application to proposed problem.	Subsystem description is given but responsibilities are vague. Estimates are not given.	Describes subsystems and their intended functional responsibilities. Gives rough estimates for effort of subsystem completion.	
3. Describes subsystem dependencies.	Shows no understanding of subsystems and what dependencies are described between defined subsystems.	Shows a basic understanding of system dependencies but does not apply this to current project.	Subsystem dependencies are alluded to but no concrete definitions are either modeled or articulated.	Describes dependencies between subsystems. Supports dependencies in statements derived through sound analysis.	
4. Reflects subsystems and dependencies in project schedule.	Does not show understanding of development scheduling based on management of development effort.	Gives a schedule but this schedule does not map to project subsystem construction.	Gives an idea of project scheduling showing a good chart of system construction. Does not show a firm grasp on deployment dependencies.	Produces a feasible schedule for system creation and deployment taking subsystem creation and dependency into account.	

PSLO #4

A broad education and knowledge of contemporary issues necessary to reason about the impact of embedded system based solutions to situations arising in society.

Performance Criteria	Limited or No Proficiency (1)	Some Proficiency (2)	Proficiency (3)	High Proficiency (4)	Score
1. Defines and evaluates end users.	Shows no understanding of who the direct users of the system will be.	Shows a basic idea of end users with limited discussion on their motivation for use of the system.	Shows detailed knowledge of individual user types and a good understanding of user motivation for use of the system.	Describes populations of users, describes their interest in the system, and provides a generalized view of the population from which end users are derived.	
2. Defines system behavior as related to defined users.	Shows little or no grasp on specifics related to what the defined system will do.	Shows a general understanding of system behavior and how users will interact with the system. Indirect outcome of system operation is unclear.	Describes detailed system behavior, detailed user interaction, and direct effect of system operation on individual users.	Discusses system functional behavior as desired by the direct user population, system use as desired by the direct user population, and the outcome of system operation as directed at the direct user population.	
3. Describes impacts of system operations on end user population.	Shows limited or no understanding of how the end system will be used by the target user population or what impacts it will have on them as a group.	Discusses immediate benefits of the system to the end user population.	Describes direct and indirect benefits of the system to individual users of the system	Discusses system operations, how they may be used by the end user population, and the ramifications of proper and improper use in the direct user population.	
4. Extrapolates impacts to include groups beyond immediate users.	Has no extrapolation or relevant information related to larger impacts of the designed system at a societal level.	Shows limited understanding related to system use and place at a societal level.	Shows a good understanding of system scope, operation, and effects on a societal population.	Discusses ramifications of system operation beyond the immediate scope of the target system installation. Considers far reaching effects on the general population. Extrapolates future effects and potential use.	

PSLO #11

Working effectively, independently, and in multi-person teams.

OIT Team and Group Work Rubric, p. 1				
Performance Criteria	No/Limited Proficiency (1)	Some Proficiency (2)	Proficiency (3)	High Proficiency (4)
